

THE GOLDEN ERA OF MUSLIMS

A script by Haleemah Zuhair

Talent show 2022

Script

Case no.1 : Jabbar Bin Hayyan

Judge : The lawsuit for intellectual property rights of muslim scientists of the golden era begins today on November 2022. (bangs hammer) Defendants do you plead guilty or not guilty ?

Defendants : not guilty, your honour.

Judge : Okay, we shall begin with the plaintiffs. Miss Haleemah, please start.

Plaintiff attorney : Thank you, your honour. I shall begin with a famous quote of Hazrat Ali (RA). "Protect yourself from the evil of those you have favoured." Your honour, let us take ourselves back to the 8th and 7th century, when all of mankind was in a sea of ignorance and blindness. This time period is referred to as "the dark ages" but we muslims, call it the " golden era". Why ? because certain muslim scientists worked hard, day and night and built up a ladder to our modern inventions. They discovered the basics of science and technology and advanced in every aspect. Your honour, the scientists were the saviours of mankind and we are all indebted to them. We have miscredited them and wrongly attributed them. Your honour, our humanity has failed us once again; which is why I am here to fight for what is right and seek justice. Thank you.

Judge : Miss Zoya, you may proceed.

Defence attorney: Thank you. I really appreciate Miss Haleemah's initial statements ; poetic, with the aim of playing with emotions, but every rational man will refuse to fall into such a trap of words. Your honour, the plaintiff attorney, like many others, has tried to talk about a glorious past that never even existed. My logical thinking cannot allow me to even imagine such a history of a nation that today does not even have money to eat poison, a nation that is fragmented and one blow can shake its weak building. A nation that has no economic or political importance, yet they talk about a history, so legendary. It is unbelievable. We need to open our eyes and realise who the true saviours of mankind are. Thank you.

Judge : Okay, please call your witness for the case of Jabbar Bin Hayyan, Miss Haleemah.

(Mr. Zubair Kiyani enters) Takes oath.

Zubair : "I pledge that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth."

Plaintiff attorney : for the record, please tell your name.

Zubair : Zubair Kiyani

Plaintiff attorney : are you currently studying and where ?

Zubair : I just completed my degree in history from Oxford University.

Plaintiff attorney : Please explain how you got to know about Jabbar bin Hayyan?

Zubair : In the final weeks of University, I was working on my thesis, and while looking for inspirational personalities, I crossed Jabbar bin Hayyan and found his long list of achievements.

Plaintiff attorney: Can you list his achievements ?

Zubair : Jabbar is the first person to discover acids, namely Hydrochloric acid, nitric acid,

citric acid, tartaric acid and aqua regia. He purified mercury and coined the term

“alkali”. The Jabirian corpus is a compilation of all his work. Unfortunately, his work is miscredited.

Plaintiff attorney : why do you think his work is miscredited ?

Zubair : while researching, I came across an influential Zionist scientist called “Paul Kras” who claimed that the Jabirian corpus was not written by Jabbar, but was written by his students.

Plaintiff attorney : Do you think it is not written by Jabbar bin Hayyan ?

Defence attorney : Objection your honour!

Judge : on what basis ?

Defence attorney : Miss Haleemah is asking for the witness’s opinion.

Judge : sustained.

Plaintiff attorney : To rephrase the question, on what basis can it be said that this compilation is unreal?

Zubair : It's a baseless allegation. Jabbar did write the Jabirian Corpus.

Plaintiff attorney : Thank you. (motions Zoya). Your witness,

Defence attorney : Okay Zubair, do you have any proof to show that the Jabirian Corpus was written by Jabbar bin Hayyan.

Zubair : his intellect is enough proof.

Defence attorney : Any solid evidence ?

Zubair : (hesitates) no.

Defence attorney : Does that mean you thought Paul Kras’s allegation was baseless just because Jabbar Bin hayyan was intellectual ?

Plaintiff attorney : Your honour, I object ! She’s asking a lead question.

Judge : sustained

Defence attorney : Then what proof do you have that Paul’s allegations were unreal ?

Zubair : I don’t have proof but that does not .. (interrupted)

Defence attorney : Thank you. No more questions.

Judge : please call your witness, Miss Zoya.

(Paul Kras’s brother in law, Leo Strauss enters)

Leo : "I swear that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth; that I shall conceal nothing from the Court, and that if I say anything which is untrue or conceal anything may the wrath fall on me."

Defence attorney : for the record please tell your name ?

Leo : Leo Strauss.

Defence attorney : where do you live ? and explain your relation with Paul Kras ?

Leo : I’m his brother in law. I’m a Zionist, and I lived in Palestine for most of my life, but then shifted to Chicago.

Defence attorney : For how long have you known each other ?

Leo : since 1946, when we started university.

Defence attorney : please enlighten us on your and Paul’s thesis?

Leo : Paul and I were close friends, so we worked together on our thesis. We were very inspired by Jabbar bin Hayyan and his extraordinary work in the beginning, but then soon we realised how it was all a lie, and we had been manipulated.

Defence attorney : How exactly have we been manipulated? Can you read the lines from yours and Paul's thesis as evidence ?

Leo: The thesis says " A scientist called Jabbar Bin Hayyan did exist in the backward eras, but his work is copied from other scientists. Out of a hundred discoveries, barely one or two are solely his. His compilation of work "the Jabirian Corpus" has not even been written by him, but by his followers, in honour of their teacher, we only taught them a few basic things.

Defence attorney : do you have any logical reasoning to prove his plagiarism?

Leo: Yes. If you read the Jabirian Corpus, you will see its tone and expression changes at every page or chapter. At times, one chapter even contradicts the other.

Defence attorney : (Zoya smiles wickedly and motions Haleemah) Thank you. Your witness.

Plaintiff attorney: Okay, you've said that The jabirian corpus was not written by Jabbar bin Hayyan ?

Leo : yes.

Plaintiff attorney: My sources explain that many disagreed with your thesis. You see its a simple rule, majority is authority.

Leo: (rolls his eyes) The truth is always bitter.

Plaintiff attorney: A question well dodged. Whatsoever, moving on to your education, which university did you and Paul study from.

Leo: University of Chicago.

Plaintiff attorney: My sources say you and Paul did not belong from very wealthy families ?

Leo: yes.

Plaintiff attorney: how did you manage to study in one of the world's best universities?

Leo: Scholarship

Plaintiff attorney: Could you enlighten us on your circle of friends?

Leo: me, Paul, and a guy Sigmund.

Plaintiff attorney: Sigmund Levingston, correct? (shows a pic of him)

Leo: yes.

Plaintiff attorney: did you have any idea he was the founder of Anti Defamation league, a globally defamed jewish organisation who has been known for spreading false propaganda?

Defence attorney : Objection, irrelevant questions.

Judge: overruled. It has great relevance.

Leo: (anxiously) I, uh, No.

Plaintiff attorney: You didn't know even though he had started working on ADL, near 1946 and 1947, even though you were his friend?

Leo: he did discuss it but

Plaintiff attorney: So you knew? Please give a clear answer.

Leo: Yes, to some extent.

Plaintiff attorney: Okay, let me get this straight, you and Paul knew globally defamed organisations. It feels extremely twisted. (stops for a second). Moving on, when did Paul marry your sister ?

Leo: 1945

Plaintiff attorney: did she get diagnosed with lung cancer in 1946? And Paul got her treated in December?

Leo: yes.

Plaintiff attorney: you mentioned that you belonged from a poor family. How did you bear the expenses of chemotherapy?

Defence attorney: Objection, irrelevant. And she's also asking personal questions.

Judge: overruled. It's neither irrelevant nor personal.

Plaintiff attorney: my question is yet to be answered.

Leo: I don't remember? (confused)

Plaintiff attorney: Your brother was close to the founder of globally defamed ADL, and treated his wife in the same year ADL was formed?

Leo: they both have no connection, because Sigmund never funded him ! (angrily)

Plaintiff attorney: (stops, lets it sink in) I never asked that. Out of where did this thought strike you that ADL was funding Paul to write anti-Muslim content?

Leo: I was merely saying ...

Plaintiff attorney: No more questions your honour, anyone can connect the dots now !

Judge : You may take your seats.

(there will be a pause where the judge and jury have a small discussion, but not audible.
Later, the second case begins)

Case 02: Abubakar ibn Yahya ibn Bajjah. Also known as Avempace.

Judge: Plaintiff may call the next witness for the case of Abubakr Ibn Yahya.

(Al Wazir al Hassan enters)

Al wazir: "I pledge that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth."

Plaintiff attorney: For the record please tell your name?

Al wazir: Al wazir Al Hassan.

Plaintiff attorney: How do you know Abu-bakar ibn yahya ibne al bajjah, also known as Avempace.

Al wazir: I was his student. His will holds me the guardian of all his work and research.

Plaintiff attorney: (takes out a copy of his will, and shows the judge) Moving on, can you list Al Bajjah's achievements?

Al Wazir: He has contributed to physical sciences and botany. He proposed the planetary model, and defined kinematic motion in the best way. His compilation of work is called Kitab Al Nafs, but I lost the last five chapters six months after I got the book. He also laid the basis of the third law of motion, that states, "For every force there is always a reactional force".

Plaintiff attorney: is it not similar to Newton's third law of motion?

Defence attorney: Objection. Your honour, she is asking for the witness's opinion.

Judge: sustained.

Plaintiff attorney: did you ever show anyone his work?

Al Wazir: Yes I did.

Plaintiff attorney: who?

Al Wazir: Isaac Newton. I showed it to him at the 22nd physics exhibition held at his residence.

Plaintiff attorney: Did he frequently have such exhibitions?

Al Wazir: Yes, he did. Newton sends an open invite to scientists and they come and have discussions and show their ideas.

Plaintiff attorney: Because you went there, what did Newton say about Ibn e Bajjah's work?

Al Wazir : He said that Ibn e Bajjah's work was too vague and dismissed me.

Plaintiff attorney: Did you carry any manuscripts with you to show his work?

Al Wazir: Yes, I did. I submitted them to Isaac Newton.

Plaintiff attorney: What did the manuscripts have?

Al Wazir: It contained work on physical sciences and theory of impressed force.

Plaintiff attorney: that's it (motions zoya) your witness.

Defence attorney: Why among all scientists did you choose Isaac Newton to show Ibn e al Bajjah's work?

Al Wazir: Mainly because he's very famous and has a wide spread reach. I discussed this idea with other fellow researchers and they suggested that I visited Newton.

Defence attorney: Many people come to the exhibitions, so did someone see you entering the house?

Al Wazir: No. Actually, a day before the exhibition, someone came to my place telling me that I am supposed to enter from the backdoor, or else I will be sent back.

Defence attorney:: (clears throat) it's hard to digest that. (stops) by the way, who asked you to come from the back door?

Al Wazir: I don't know him.

Defence attorney: (throws hands in frustration) Your honour, am I the only one feeling this is all made up?

Al wazir: It is not !

Defence attorney: Oh really ? you entered Isaac Newton's house from the backdoor because some anonymous person told you to do so ! Very, very understandable. No more questions.

Judge: defendants may call their witness.

(Isaac Newton enters)

Newton: "I swear that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth; that I shall conceal nothing from the Court, and that if I say anything which is untrue or conceal anything may the wrath fall on me."

Defence attorney: Did you solely discover Newton's third law of motion that says for every force, there is an equal and opposite reaction".

Isaac: Yes I did and It was an individual's work.

Defence attorney: Were you familiar with Ibn al Bajjah's work?

Isaac: no, but I might have heard the name a few times.

Defence attorney: Did a man Al Wazir Al Hassan come to your residence at the 22nd science exhibition?

Isaac: no. he didn't.

Defence attorney: (takes out a list of scientists that came to Newton's house and shows to judge) Did you ask someone to tell Al Wazir Al Hassan to enter from the back door?

Isaac: No. Why would I?

Defence attorney: Thank you. (motions Haleemah). Your witness

Plaintiff attorney: So, you are saying Al Wazir Al Hassan did not come to your place or you do not remember him coming?

Isaac: I have a good memory. He didn't come.

Plaintiff: Did you personally make that list of scientists who came to your place?

Isaac: yes.

Plaintiff attorney: And what if I prove that Al Wazir Al Hassan did come to your place?

Isaac: (irritated) you can't prove it. He did not come.

Plaintiff attorney: Suppose I did.

Isaac: Why would I ever suppose such a ridiculous thing?

Plaintiff attorney: I insist.

Isaac: (angry) What sort of unprofessional behaviour is this ?!

Defence attorney: Objection your honour! She's arguing with the witness.

Judge: Objection overruled, she's making a point. Please carry on.

Isaac: Well if by some means you find a witness to affirm the presence of Al Wazir at my residence, which you never will, you may come to a conclusion that suits you. I shall not object.

Plaintiff attorney: (let's sink in). Ladies and gentlemen, please note Sir Isaac Newton's words. (Isaac smirks).

Isaac: HE. DID. NOT. COME. You better note that down too.

Plaintiff attorney: Noted. Last question. (takes out two pictures) which one is your bodyguard?

Newton: this one (confused)

Plaintiff attorney: Thank you. Your honour, can I call my final witness?

Judge: Yes, you may.

(body guard enters)

Guard: "I swear that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth; that I shall conceal nothing from the Court, and that if I say anything which is untrue or conceal anything may the wrath fall on me."

Plaintiff attorney: For the record, please tell your name.

Guard: Maxwell hastings.

Plaintiff attorney: Were you on duty when the 22nd science exhibition was held and where ?

Guard: yes, I gave duty on the back door.

Plaintiff attorney: Did Isaac Newton ask you to tell Al Wazir Al Hassan that he should enter from the back door?

(The guard looks at Newton and hesitates)

Plaintiff attorney: do not get pressurised. Tell the truth only.

Guard: Yes. he did.

Defence attorney: Objection. Your honour, she is lying !

Judge: do not object on baseless points. Objection overruled. Please be seated.

Plaintiff attorney: did you see Al Wazir enter?

Guard: yes I did.

Plaintiff attorney: thank you, I'd like to repeat sir Isaac's statement in front of the court, " if by some means you find a witness to affirm the presence of Al Wazir at my residence, which you never will, you may come to a conclusion that suits you. I shall not object." Your honour, these are not my words. These are the words of the legendary Isaac Newton. The only possible conclusion is that, your honour, perhaps Newton's ideas did not fall from an apple tree, instead they fell from the great minds of Muslim scientists before them.

Judge: thank you Miss Haleemah. Mr. Hastings, you may leave. Is there anything else the defence would like to say?

Defence Attorney: No, your honour. You pulled a great drama, Miss Haleemah.

Judge: No cross talking is allowed. Please abide by the rules of the court.

Defence Attorney: of course. (nods)

(judge and jury discussion)

Case no: 03; Omar Khayyam.

Judge: Yes, Miss Haleemah. Please proceed with your next witness for the case of Omar Khayyam. (Omar Khayyam enters)

Omar khayyam: "I swear that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth."

Plaintiff attorney: For the record please tell your name.

Omar: Ghiyāth al-Dīn Abū al-Faṭḥ ‘Umar ibn Ibrāhīm.

Plaintiff attorney: Okay. Omar, please can you list down your achievements?

Omar: I compiled astronomical tables and contributed to calendar reform and discovered a geometrical method of solving cubic equations by intersecting a parabola with a circle. I am a mathematician and poet. I discovered 19 types of cubic equations. I laid the basis of analytic geometry.

Plaintiff attorney: okay, where are your works saved?

Omar: some books and manuscripts. Mainly, “a unique essay by the uniquely wise” and “the algebra of omar khayyam.”

Plaintiff attorney: Okay. Was your work appreciated by scientists of your time?

Omar: no. Sadly not. They didn’t gain much importance.

Plaintiff attorney: But they have now. (smiles) thank you Omar. You may leave.

Defence attorney: May I call my witness?

Judge: yes.

(Rene Descartes enters)

Rene : "I pledge that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth.."

Defence attorney: For the record, please tell your name.

Rene: Rene Descartes.

Defence attorney: Did you discover analytical geometry for the first time through cubic equations?

Rene: yes. I did.

Defence attorney: which scientist inspired you?

Rene: none. I worked with a fellow, Pierre de fermat.

Defence attorney: did you ever copy anyone’s work?

Rene: no.

Defence attorney:Did you ever steal some scientists' manuscripts?

Rene: no. My moral values would never allow me to do that.

Defence attorney: Were you aware of Omar Khayyam’s work?

Rene: No. never heard the name.

Defence attorney: How can we say you have not stolen Omar's work?

Rene: My work is *completely* different from his. Omar just said his work was not appreciated. Is that not enough to show it was not up to the mark? My work however, was appreciated by every single person.

Defence attorney: fair enough. Thank you. (motions Haleemah) your witness.

Plaintiff attorney: Rene Descartes, you have just claimed that you never ever have copied or stolen a scientist's work. Right?

Rene: yes. My credibility is one thing that can never be doubted.

Plaintiff attorney: I admire your confidence. (smiles) Please tell me if you know gilles personne de roberval?

Defence attorney: Objection your honour! The question is irrelevant.

Judge: Miss Haleemah please make your point clearer.

Plaintiff attorney: yes, your honour. Please answer the question.

Rene: I did know him.

Plaintiff attorney: what sort of relation did you have with him?

Rene: a pleasant one. He was a fellow scientist.

Plaintiff attorney: did you ever have any arguments with him?

Rene: no, I didn't. I was an extremely respectable person among my peers.

Plaintiff attorney: That's a shocking revelation. Thank you. May I call my witness your honour?

Judge: You may.

(Gilles enters)

Gilles: "I swear that the evidence that I shall give before the Court in this case matter shall be the truth; the whole truth and nothing but the truth; that I shall conceal nothing from the Court, and that if I say anything which is untrue or conceal anything may the wrath fall on me."

Plaintiff attorney: Gilles, did you have an argument with Rene descartes?

Gilles: I did. An ugly one, to be precise.

Plaintiff attorney: Oh. I just heard that someone's credibility can never be questioned. However, can you narrate the events of this argument?

Gilles: yes. I and Rene had a disagreement on Pascal's Law. Rene was extremely dominant among us and would often boss around. He couldn't cope with the fact that I negated him, thus in front of our peers, Rene humiliated me and made a spectacle out of me. Later, Rene took my work, forcing me to give it to him for 'consultation' and then a week later he published a paper copying my work. Rene had power, which is why people sided with him. But we knew his dark side was always prevalent.

Plaintiff attorney: Did Rene ever copy other scientist's works too?

Gilles: yes, did.

Plaintiff attorney: what about Omar Khayyam's work?

Gilles: I had a feeling analytical geometry and cubic equations were not really his idea. I wouldn't be surprised if they were copied.

Plaintiff attorney: Thank you Gilles. Your honour, it has clearly been proved that Rene Descartes has lied and misstated, even though he took an oath. Your honour, his credibility has severely been damaged, and it has become impossible for the court to believe his words. I demand for another witness to be called from the Defence and Rene Descartes Words to be nullified from this hearing.

Judge: Your demands are lawful. Defence should call in another witness or provide evidence.

Defence attorney: yes, your honour. I would like to ask the Plaintiff to bring Omar Khayyam's manuscripts while I provide the court with Rene Descartes Manuscripts. The difference shall be cleared there and then.

Judge: please proceed.

(man with Omar's manuscripts enters)

Plaintiff attorney: sir, did Omar Khayyam write this in your presence.

Man: yes he did.

Plaintiff attorney: thank you.

(man enters with Rene's manuscripts)

Defence attorney: sir, did Rene Descartes write this in your presence?

Man: He did.

Defence attorney: Thank you.

(defence attorney goes to judge)

Defence attorney: Your honour, you can see that Rene Descartes has done this work. Some parts have been scribbled, which shows that he did this on a trial and error method. Thus, the manuscripts nullify what my fellow lawyer has tried to prove.

(plaintiff attorney goes to judge)

Plaintiff attorney: Your honour, Miss Zoya has come up with the weakest points to support her statements. Omar Khayyam was born before Rene Descartes, and if we look at this work by Rene Descartes, the numbering of the cubic equations is like Omar Khayyam's. 4 has come directly after 2. If Rene did not copy this, the numbering would be correct.

Judge: Thank you Miss Zoya and Miss Haleemah. Please be seated. The court will announce its verdict in a while.

(judges and jury discuss)

Judge: The court is ready to announce the verdict, but first, what does the plaintiff pray for?

Plaintiff attorney: Your honour, my clients deserve to get full credit for their hard work. The world is unaware of the people who beautified and helped mankind, thus the plaintiff prays for (1) special damages in the sum of \$200,000. (2) for the muslim scientists to be respectfully credited in their respective fields and appreciated at every level, be it professional or educational. Thank you.

Judge: Okay. The plaintiffs and the defendants have presented their witnesses and evidence in favour of their clients. Thus the court has come to a verdict.

(the judge hands over a page to a person)

Person: In light of the witnesses and evidence, the court finds the defendants, Rene Descartes, Isaac Newton and Paul Kras guilty in the case of intellectual property rights on November 2022. The defendants must pay a sum of \$200,000 for special damages, and the victims will be appreciated and credited on every level. The court is dismissed.

(The judge bangs the hammer)

.....
